The course level-2 consists of a workshop with lectures and laparoscopic surgery on human cadavers. The lectures serve to explain the required anatomical and surgical knowledge and also to review and explore further the lessons acquired during Certification ISON-level 1 (see www.possover-neuropelveology.com), with regard to the diagnosis in neuropelveology. This course teaches laparoscopic technique for exposure of the pelvic nerves and plexus. It provides the necessary knowledge for surgical expertise in "nerve sparing" surgery of the pelvis as well as for different techniques of laparoscopic neurosurgery to the pelvic nerves, including the technique of implantation of stimulation electrodes to the pelvic nerves – the **LION procedures**. As part of this course, we also train some techniques for pelvic nerves infiltration, which are very important in the diagnostic process in neuropelveology but also for some therapeutic treatments as well.
